## Motiv Operating Instructions

Dual Actuator Electric Height  
Adjustable Workstation

## Dual Actuator Electric Height Adjustable Workstation

- 160kg load rating (2 leg) - 240kg load rating (3 leg workstation)
- Anti-collision safety sensors + overload and overheat protection circuits

### Manual Height Setting

- Press 'Up' or 'Down' until desired height is reached.

## Programme Height Setting

- Once desired height is reached, this can be saved as a programmed setting by pressing 'S' followed by pressing one of the 4 memory buttons to store the selected height setting. To recall height settings, simply press the appropriate memory button and desk will raise or lower to the saved setting.

## Anti-tamper/Child Lock

Height adjust operation can be locked by simultaneously pressing 'S' and 'Down' buttons for approx. 7 seconds until 'LOC' is displayed in LCD panel. Desk will not operate until unlocked by repeating this step.

## Diagnostics

- **Display shows 'EOI':** Overload protection circuit has been triggered — remove some weight or object obstructing free movement and push up or down button to resume normal operation.
- **Display shows 'HOT':** Overheat protection has been triggered — stop operation for at least one minute before resuming use.
- **Display shows 'RST' or 'E07/E08':** Control system requires reset — press down button until desk reaches lowest height setting to re-calibrate system settings. Normal operation should now resume.
