Designed by PLN Group

## The tranquil backdrop to your busy office

Support employee wellbeing and productivity by creating tranquil workspaces where your team can work without stress and distraction. Backdrop is an acoustic screen family designed to reduce distraction from noise, decrease visual interruption and improve wellbeing through natural biophilic design principles. Use Backdrop to create private zones for focus work in an open plan office or to form spaces where groups can collaborate without disturbing others.

### About

Backdrop is a collection of free-standing acoustic screens which incorporate our world-leading Phonix™ nanofibre to reduce noise. Inspired by the landforms and native flora of New Zealand, Backdrop is available in two design families, Peak and Leaf, in a range of shapes, lengths and heights.

Easy to move and manoeuvre.

Designed and made in New Zealand

### Sound absorbing

Backdrop contains Phonix™ nanofibre woven with extremely fine fibres with incredible porosity making it exceptionally sound absorbent. This reduces the sound energy of speech to a more manageable and less distracting level. Products incorporating nanofibre are scientifically proven to help resolve the issues of noise in open spaces.

### Applications

Backdrop is a flexible, scalable and mobile solution which can be used to:

- Group screens to create a tranquil space for focus work or an area where collaboration can take place without disturbing others.
- Reduce distraction by shielding team members from the noise of the office around them.
- Form a visual and acoustic screen to define and divide spaces.
- Group multiple units to create a wall or freestanding room.
- Introduce natural shapes and forms to soften the hard lines of the office environment and reduce stress.

Backdrop is ideal for open plan offices, reception areas, breakout zones, presentation spaces, collaboration areas and many more.
